

**GOVERNMENT COLLEGE FOR WOMEN  
(AUTONOMOUS)  
KUMBAKONAM**

**DEPARTMENT OF MATHEMATICS**

**Programme : B.Sc., Mathematics**

**Programme Code : USMA**

**SYLLABUS**

**2021 – 2022 – I YEAR**

**2022 – 2023 – II YEAR**

**2023 – 2024 – III YEAR**

### **Programme Outcomes(PO)**

**On successful completion of B.Sc., Mathematics programme, the graduate students will be able to:**

- PO1.** Develop the knowledge of Mathematics in problem solving, planning and ability to learn new Information.
- PO2.** Inculcate the habit of active listening, to identify the devise for solving the problem, significant factor in promoting lifelong learning.
- PO3.** Have practical exposures which equips the students to face modern challenges in the relevant discipline.
- PO4.** Exhibit proficient in arriving innovation-based knowledge, information to provide valid conclusion.
- PO5.** Establish suitable meaning for education, cultivate the students to develop their skill for employability.
- PO6.** Create, select and apply decision making problem in research aspects.
- PO7.** Communicate effectively on various activities and make effective presentations.
- PO8.** Promulgate the ability to learn Mathematics with higher moral and ethical values.
- PO9.** Formulate profound ability to pursue higher education in global level.
- PO10.** Grow civic responsibilities, personality traits and human values through interaction with society.

### **Programme Specific Outcomes(PSO)**

**On successful completion of B.Sc., Mathematics programme, the graduate students will be able to:**

- PSO1.** Communicate mathematics effectively by written, computational and graphic means.
- PSO2.** Demonstrate in-depth knowledge of Mathematics, both in theory and applications.
- PSO3.** Exhibit depth knowledge in analytical and critical thinking to identify, formulate and solve problems in the field of Science and Engineering
- PSO4.** Take up mathematics programme at Master's level anywhere in and outside India.
- PSO5.** The Mathematics UG students after the completion of the course will gain a thorough Knowledge in preparing competitive examinations conducted by TNPSC/UPSC/BSRB

**GOVERNMENT COLLEGE FOR WOMEN (AUTONOMOUS) KUMBAKONAM**

## CC - I DIFFERENTIAL AND INTEGRAL CALCULUS

<b>Theory Hours</b>	<b>: 6</b>	<b>Course Code</b>	<b>: U21MC101</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives:

1. To expose the students to various techniques of integration.
2. To study concepts of definite integrals.

### UNIT - I

Methods of Successive Differentiation – Leibnitz’s Theorem and its applications – Increasing and Decreasing functions.

### UNIT - II

Curvature –Radius of Curvature in Cartesian and in polar coordinates – Centre of curvature – Evolutes and Involutives.

### UNIT - III

Properties of definite Integrals - Integration by parts – Reduction formulae.

### UNIT - IV

Double Integrals – Changing the order of Integration – Triple Integrals.

### UNIT - V

Beta and Gamma functions and relation between them – Integration using Beta and Gamma functions.

### TEXT BOOKS:

- [1] T.K. Manickavasagam Pillai and others Differential Calculus, volume– I  
S.V. Publications, Chennai- Reprint 2013.
- [2] T.K. Manickavasagam Pillai and others, Integral Calculus, volume –II  
S.V.Publications, Reprint 2013.

**UNIT I** : Chapter 3 (sections 1.1 to 2.2) and  
Chapter 4 (sections 2.1 , 2.2) of [1]

**UNIT II** : Chapter 10 (sections 2.1 to 2.6) of [1]

**UNIT III** : Chapter 1 (sections 11, 12 and 13) of [2]

**UNIT IV** : Chapter 5 (sections 2.1, 2.2) and (section 4) of [2]

**UNIT V** : Chapter 7 (sections 2.1 to 2.3) and (section 3, 4, 5) of [2]

**REFERENCE(S):**

- [1] Duraipandian and Chatterjee, Analytical Geometry.
- [2] Shanti Narayanan , Differential and Integral Calculus, S.Chand and Co., 1996.

viswanathan printers, 2007.
- [4] Arumugam Issac, Allied Mathematics, New Gamma Publishing house, 2007.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Find higher derivatives of given function by using Leibnitz's theorem.
- CO2:** Study the knowledge on curvature with its  
properties in both Cartesian and polar form.
- CO3:** Evaluate indefinite integrals and reduction formulae.
- CO4:** Classify and solve the change of order of integration.
- CO5:** Use Beta and Gama functions to solve their properties.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

## CC- II PROGRAMMING IN C

<b>Theory Hours</b>	<b>: 3</b>	<b>Course Code</b>	<b>: U21MC102</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives:

1. The course is oriented to those who want to advanced structured procedural programming understanding and to improve C programming skills.
2. The objects is to provide students with understanding of code organization and functional hierarchical decomposition with using complex data types.

### UNIT - I

Introduction to C – History – Identifiers – Keywords – Variables – Data types – Operators and Expressions – Input and Output statements.

### UNIT - II

Conditional statements: simple if, if-else, nested if else, else if ladder, switch and go to statement – Looping statements: while, do-while and for statements – Nesting of loops.

### UNIT - III

Introduction to Arrays – One dimensional – Two dimensional.

### UNIT - IV

Introduction to Modular Programming: Functions – Call by Value – Call by reference Category of functions – Nesting of functions.

### UNIT - V

Introduction to structures and unions – Array of structures – Array within structures, Structures within Structures.

### TEXT BOOK :

[1] Balagurusamy. E, Programming in ANSI C, Tata McGraw – Hill, Third Edition, 2013.

**UNIT I** : Sections 1.1 - 1.10, 2.2 – 2.14, 3.2, 3.16, 4.1 - 4.5.

**UNIT II** : Sections 5.1 - 5.9, 6.1 - 6.5.

**UNIT III** : Sections 7.1 - 7.4.

**UNIT IV** : Sections 9.1 - 9.12.

**UNIT V** : Sections 10.1 - 10.8.

**REFERENCE (S):**

[3]C. Gottfried, Programming in C, Schaum outline series, 1996.  
[4]P. Pandiyaraja, Programming in C, Vijay Nicole Imprint Private Limited, 2005.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Describe the concept of structure oriented programming and understand various C-tokens.  
**CO2:** Illustrate with examples the idea of conditional statements and looping statements.  
**CO3:** Categorize one dimensional, two dimensional arrays.  
**CO4:** Differentiate various ‘function prototypes’ and demonstrate nesting of functions.  
**CO5:** Distinguishes the idea of structures and unions, structure and arrays.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

**CC-III ANALYTICAL GEOMETRY 3D AND TRIGONOMETRY**

<b>Theory Hours</b>	<b>: 6</b>	<b>Course Code</b>	<b>: U21MC203</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. Expose various concept of Analytical geometry of 3D.
2. Be able to understand properties of straight lines and spheres.
3. Solve trigonometry equation and applications.

**UNIT - I**

Coplanar lines – Shortest distance between two skew lines – Equation of the Line of shortest distance.

**UNIT - II**

Sphere – Standard equation – Length of a tangent from any point – Sphere passing through a given circle – Intersection of two Spheres.

**UNIT - III**

Expansions of  $\sin(n\theta)$ ,  $\cos(n\theta)$ ,  $\tan(n\theta)$  – Expansions of  $\sin^n\theta$ ,  $\cos^n\theta$  - Expansions of  $\sin(\theta)$ ,  $\cos(\theta)$ ,  $\tan(\theta)$  in powers of  $\theta$ .

**UNIT - IV**

Hyperbolic functions – Relation between hyperbolic and circular trigonometric functions – Inverse Hyperbolic Functions.

**UNIT - V**

Logarithm of a complex number – Summation of Trigonometric series – Difference method – Angles in arithmetic progression method – Gregory's Series.

**TEXT BOOKS:**

- [4] Arumugam Issac, Ancillary mathematics, New Gamma Publishing House, 2007.

### COURSE OUTCOMES :

The students will be able to

- CO1:** Gain through knowledge about angle between two skew lines.
- CO2:** Find equation of Spheres satisfying given conditions.
- CO3:** Gain knowledge in the expansion of trigonometry functions.
- CO4:** Expose various concepts of inverse trigonometry.
- CO5:** Accurately identify and apply properties of logarithmic and exponential functions, Gregory's series.

### Question Paper Pattern

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

### CC-IV PROGRAMMING IN C - LAB

<b>Theory Hours</b>	<b>: -</b>	<b>Course Code</b>	<b>: U21MC204P</b>
<b>Practical Hours</b>	<b>: 3</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 40</b>
		<b>External</b>	<b>: 60</b>

This course is mainly concentrates on programming of C and its implementation. It makes the students to be familiar with the structure of programming language and it enables them to write programs to solve real world problems using C concepts.

1. Programs on formatted input/output.
2. Programs using conditional statements.
3. Programs using looping statements.
4. Programs using one-dimensional array and two-dimensional array.
6. Programs using functions (Nesting of functions).
7. Programs on structures and unions.

**COURSE OUTCOMES :**

The students will be able to

**CO1:** Execute simple programs using input/output and conditional statements.

**CO2:** Execute simple programs using looping statements.

**CO3:** Execute simple programs using one-dimensional and two dimensional arrays.

**CO4:** Execute simple programs using strings.

**CO5:** Execute simple programs using structures.

**Question Paper Pattern**

**ANSWER ALL THE QUESTIONS**

**1 X 15 = 15 Marks**

**2 x 20 = 40 Marks**

**Record = 5 Marks**

-----  
**Total = 60 Marks**  
 -----

**Theory hours : 2**  
**Practical hours : -**  
**Exam hours : 3**

**Course Code : U212ES**  
**Credits : 2**  
**Internal : 25**  
**External : 75**

## **UNIT-I**

### **The Multidisciplinary Nature of Environmental Studies**

- Definition, Scope and Importance
- Renewable and Non-Renewable Resources
- Natural Resources and associated Problems

## **UNIT-II**

### **Biodiversity and its Conservation**

- Introduction – Definition
- Biodiversity at global, national and local levels
- India as a mega – diversity nation
- Hot-Spots of biodiversity
- Conservation of Biodiversity : In-Situ and Ex-Situ
- Conservation of Biodiversity
- Wasteland reclamation

## **UNIT-III**

### **Environmental Pollution Definition**

- Causes, Effects and Control Measures of
  - a- Air pollution Climate Change, global warming, acid rain, Ozone layer depletion, nuclear accidents and holocaust,  
  
Case studies
  - b- Water Pollution
  - c- Soil Pollution
  - d- Noise Pollution
    - Solid waste Management : Causes, effect and control measures of urban and Industrial Wastes
    - Role of an individual in prevention of pollution
    - Disaster Management : Floods, Earthquake,Cyclone and Landslides.

## **UNIT-IV**

## **Social Issues and the Environment**

- From Un-Sustainable to Sustainable development
- Urban Problems related to energy
- Water Conservation, rain water harvesting, Watershed Management
- Resettlement and rehabilitation of people : its problems and concerns case Studies
- Environmental ethics : Issues and possible solutions
- Air (Prevention and control of pollution ) Act
- Water (Prevention and control Pollution) Act
- Wildlife Protection Act
- Forest Conservation Act
- Issues involved in enforcement of environmental legislation
- Public awareness

## **UNIT-V**

### **Human Population and the Environment**

- Population growth explosion, Variation among nations – Family Welfare Programme.
- Environment and Human Health
- Human Right
- HIV/AIDS
- Women and Child Welfare
- Role of information Technology in Environment and Human health
- Case Studies.

### **Question Paper Pattern**

<b>Each unit Fifteen marks question for all topics: 5 x 15 = 75</b>
---

## **CC – V THEORY OF EQUATIONS AND VECTOR CALCULUS**

<b>Theory Hours</b>	<b>: 6</b>	<b>Course Code</b>	<b>: U21MC305</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To study the relation between the roots and coefficients and nature of the roots.
2. To study calculate the curl and divergence of vector field.
3. To develop the knowledge of the line integral, surface integral and volume integral in vector calculus.

**UNIT - I**

Relation between the roots and coefficients of polynomial Equations – Symmetric functions – Sum of the  $r^{\text{th}}$  powers of the roots – Newton’s Theorem on the sum of the powers of the roots.

**UNIT - II**

Transformations of Equations – (Roots with sign changed – Roots multiplied by a given number–Reciprocal roots) – Reciprocal equations – To increase or decrease the roots of given equation by a given quantity – Form the quotient and Remainder when a polynomial is divided by a binomial – Removal of terms – To form an equation whose roots are any power of the roots of a given equation.

**UNIT - III**

Vector differentiation – Velocity and acceleration vectors – Vector and scalar fields – Gradient of a vector – Unit normal – Directional derivative – Divergence and curl of a vector – Solenoidal and Irrotational vectors – Laplacian double operators – Simple problems.

**UNIT - IV**

Vector Integration – Tangential line integral – Conservative force field – Scalar potential – Normal surface integral – Volume integral – Simple problems.

**UNIT - V**

Gauss Divergence theorem – Stoke’s theorem – Green’s theorem – Simple problems and verification of the theorems for simple problems (statement only).

**TEXT BOOK(S):**

- [2] K.Viswanathan and S.Selvaraj, Vector Analysis, Emerald Publishers Reprint 1999.

**UNIT I** : Chapter 6 (sections 11 to 14) of [1].

- UNIT II** : Chapter 6 (sections 15, 16, 17, 18, 19, 20) of [1].  
**UNIT III** : Chapter 1 of [2].  
**UNIT IV** : Chapter 3 of [2].  
**UNIT V** : Chapter 4 of [2].

**REFERENCE(S):**

- [1] H.S Hall and S.R Knight ,Higher Algebra, prentice Hall of India, New Delhi.  
 [2] J.N. Sharma, A.R. Vasistha, Vector calculus, Krishna Prakashan Media (P) Ltd., 2004.  
 [3] Duraipandian, Laxmi Duraipandian, Vector Analysis, Emerald Publishers,Chennai-2 1986.  
 [4] Advanced Calculus, Robert C. Wrede Murray Spiegel, Tata Mc. Grew Hill, 2002.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Get the knowledge to find the relation between roots and coefficients of equations in Horner’s method and Newton’s method.  
**CO2:** Understand the reciprocal equation and quotient, remainder of equation and removal terms in equation.  
**CO3:** Understand the important definitions and basic concepts in vector and scalar function.  
**CO4:** Solve the integration of vector using methods of line, surface and volume of integral.  
**CO5:** Understand the concept of Gauss divergence theorem, Green’s theorem, Stokes’s theorem

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C** :  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total** = 75  
 -----

**CC – VI MATHEMATICAL STATISTICS**

<b>Theory Hours</b>	<b>: 3</b>	<b>Course Code</b>	<b>: U21MC306</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives:

1. To make the students gain wide knowledge in probability which plays a main role in solving real life problems.
2. To frame distribution functions and its types.
3. To study the applications of Binomial and Poisson distributions.

### UNIT - I

**Diagrammatic representation:** Types of Diagram – Bar and Pie diagram- Pictographs- graphs- Rang charts and ratio charts- Histogram – Frequency Polygon- Problems.

### UNIT - II

**Measures of general value:** Arithmetic mean - Median-Mode - Geometric mean - Harmonic mean - Quartile deviations (Simple problems only).

### UNIT - III

Correlation (two variables only) – Karl Pearson’s Correlation Coefficient - Rank Correlation - Spearman’s rank correlation coefficient (repeated and non-repeated). Linear regression – Simple problems

### UNIT - IV

Binomial and Poisson distribution – Recurrence relations for Binomial and poisson distribution - Continuous distribution: Normal distribution – Chief characteristics of normal distributions.

### UNIT - V

**Sampling distribution:** Chi square Variates – Definition – Derivation – Student’s t - Distributions – Definition – Derivation – Constant (mean and variance only). Small sample tests – paired t-test, Chi-square test of goodness of fit - Simple problems.

### TEXT BOOKS :

- [2]. S.C, Gupta and V.K.Kapoor . Fundamentals of Mathematical Statistics–Sultan chand and sons, Educational Publishers, New Delhi, Reprint – 2003.

**UNIT I** : Chapter 4 of [1]

**UNIT II** : Chapter 5 of [1]

- UNIT III** : Chapter 10 (sections 10.2, 10.4,10.4.2, 10.7, 10.7.1 to 10.7.3)  
Chapter 11 (sections 11.2, 11.2.1) of [2].
- UNIT IV** : Chapter 8 (Sections 8.4, 8.4.2, 8.5, 8.5.4) and  
Chapter 9 (Sections 9.2, 9.2.2) of [2].
- UNIT V** : Chapter 15 (sections 15.1, 15.2, 15.6.2 )  
Chapter 16 (sections 16.2,16.2.1, 16.2.4, 16.3.1 to 16.3.3) of [2].

- [3]. P.A. Navinithan, Business mathematics and Statistics, Jai publications Trichy, April – 2013.

**COURSE OUT COMES:**

The students will be able to

- CO1** : Collect, Classify and tabulate a given data and study graphical and diagrammatic representation through, Bar diagram, Pie diagrams, Histograms, Frequency polygon.
- CO2**: Understand measures of central tendency, viz., Mean, Median, Mode and Geometric mean, Harmonic mean. Workout the simple problems in discrete and continuous series.
- CO3**: Calculate Karl Pearson, Rank correlation and lines of regression
- CO4**: Compute Binomial, Poisson and Normal Distribution.
- CO5**: Relationship among t, chi-square distribution and analyze small sample test.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C** :  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total** = 75  
 -----

<b>Theory Hours</b>	<b>: 2</b>	<b>Course Code</b>	<b>:U21M3NME1:1</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. Develop Mathematical Aptitude Skills.
2. The formulae given are useful over many problems.
3. To provide a confidence to appear in competitive examinations.

**UNIT - I**

Numbers – HCF and LCM – Decimal Fractions.

**UNIT - II**

Square Roots and Cube Roots – Percentage – Average – Ratio and Proportion – Partnership – Profit and Loss.

**UNIT - III**

Time and Work – Time and Distance.

**UNIT - IV**

Problems on Trains – Problems on Numbers – Problems on Ages.

**UNIT - V**

Area – Volume and Surface Areas.

**TEXT BOOK:**

[1]. R.S Aggarwal, Quantitative Aptitude , S.Chand and company Ltd., New Delhi,2008.

**REFERENCE(S) :**

- [1]. B.S.Sijwali, quantitative aptitude Arihant Publications(india) Pvt Ltd 2007.
- [2]. Abhijit Guha, Quantitative Aptitude for Competitive Examinations, Mc Graw Hill Companies, 2006.
- [3]. Arora .P.N. and Arora.s. 2009, Quantitative Aptitude Mathematics: Volume-1,S.Chand and company Ltd.

- [5]. Srinivasan.T.M., Perumalswami.S. and gopala Krishnan.M.D., 1985 , Elements of Quantitative Techniques, Emerald Publishers.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Expose various types of Numbers. Use least common multiple method.
- CO2:** Crack challenging problems of simplifications based on complex function, square roots, cubic roots, unit digits, Exponents and percentages within a few seconds with the help of short tricks without knowledge.
- CO3:** Learn and apply tips and logical method on difficult problems of topics like time and work, pipes and cistern, speed and distance, average speed etc.
- CO4:** Study Problems on Trains, Numbers, Ages.
- CO5:** Apply easiest technique to solve Volume and Surface area.

**Question Paper Pattern**

**Each units fifteen multiple choice questions for all topics:  $75 \times 1 = 75$**

<b>Theory Hours</b>	<b>: 2</b>	<b>Course Code</b>	<b>:U21M3NME1:2</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

- 1.To learn the simple techniques for solving aptitude problems.
- 2.To enable the students prepare themselves for various competitive examinations.

**UNIT - I**

Percentage, Profit and Loss.

**UNIT - II**

Simple Interest, Compound Interest.

**UNIT - III**

Banker's Discount.

**UNIT - IV**

Time and Distance.

**UNIT - V**

Time and Work.

**TEXT BOOK:**

- [1] . R.S. Aggarwal, Quantitative Aptitude, S.Chand and company Ltd, New Delhi 2014.

**REFERENCES :**

- [4]. Kothari. C.R.1989, Quantitative techniques,Vikas Publishing House Pvt Ltd.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Apply proportions to rate, base and percentage problems.
- CO2:** Apply the principal of simple interest and compound interest relevant problems in financial applications.
- CO3:** Gain knowledge about to Banker's Discount and calculation of interest.
- CO4:** Understand the problems to based on Time and Distance.
- CO5:** Study problem on work are based on application of concept of ratio of time

### **Question Paper Pattern**

<b>Each unit fifteen multiple choice questions for all topics: <math>75 \times 1 = 75</math></b>
--

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U21MC407</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objective:**

1. To study the algebra of sequences.
2. To study the convergence and divergence of series and the methods of testing the convergence.
3. To study the binomial, exponential and logarithmic series.

**UNIT – I**

Sequence, limit, convergence of a sequence – Cauchy’s general principle of convergence – Cauchy’s first theorem on Limits – Bounded sequence – Monotonic sequence always tends to a limit, finite or infinite.

**UNIT – II**

Infinite series Definitions of Convergence, Divergence and Oscillation– Necessary condition for Convergence – Convergence of  $\sum \frac{1}{n^p}$  and Geometric series.

**UNIT – III**

Comparison test - D’ Alembert’s Ratio test and Raabe’s test, Simple problems based on above tests.

**UNIT– IV**

Cauchy’s condensation test - Cauchy’s Root test and their simple problems – Alternative series with simple problems.

**UNIT – V**

Binomial theorem for rational index – Exponential and Logarithmic series – Summation of series and approximations using these theorems.

**TEXT BOOK :**

- [1] T.K. Manicavachagampillai, T. Natarajan, K.S. Ganapathy, Algebra, Volume – I, S.Viswanathan Pvt Limited, Chennai,2013.

**UNIT -I** : Chapter 2 (sections 1 to7)

**UNIT -II** : Chapter 2 (sections 8, 9, 10, 11, 12 and14)

**UNIT -III** : Chapter 2 (Sections 13, 16, 18 and 19)

**UNIT -IV** : Chapter 2 (sections 15, 17, 21 to 24)

**UNIT -V** : Chapter 3 (sections 5 to 11, 14) and Chapter 4 (Sections 2, 3, 5 to 9).

**REFERENCE (S) :**

R. Chand and Co., 1999.

[2] Dr. S.Arumugam, Sequences and Series, New Gamma Publishers, 1999.

[3] Richard, R. Goldberg, Methods of Real Analysis  
[Oxford and IBH Publishing Co. Pvt LTD].

**COURSE OUT COMES:**

The students will be able to

**CO1:** An ability to work within an axiomatic framework sequence and limit.

**CO2:** A detailed understanding of how Cauchy's criterion for the convergence of real and complex sequences and series follows from the completeness axiom and the ability to explain the steps in standard mathematical notation.

**CO3:** Knowledge of some simple techniques for testing the convergence of sequences and series and confidence in applying them.

**CO4:** Familiarity with a variety of well-known sequences and series, with a developing intuition about the behavior of new ones.

**CO5:** An understanding of how the elementary functions can be defined by power series, with an ability to deduce some of their easier properties.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C** :  $3 \times 5 = 30$  (Each Unit Carries One Questions )

## CC – VIII MATHEMATICAL STATISTICS PRACTICAL (USING SPSS)

<b>Theory Hours</b>	<b>: -</b>	<b>Course Code</b>	<b>: U21MC408P</b>
<b>Practical Hours</b>	<b>: 3</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 40</b>
		<b>External</b>	<b>: 60</b>

### Objective:

To give practice on different statistical techniques using SPSS.

### List of Experiments:

1. Graphical display of data
2. Calculation of measure of central tendency.
3. Correlation.
4. Regression.
5. Fitting of Binomial and Poisson distribution.
6. Fitting of Normal distribution.
7. Chi-square distribution.
8. Students t-distribution.
9. Paired t- test for Mean.
10. Chi-square test for Goodness of fit.

(Five questions have to be answered out of six questions. At least one question from each unit must be asked. Each question carries ten marks).

**(Internal Marks – 40 ; External Marks – 60)**

### TEXT BOOK :

[1] S.C Gupta and V.K. Kapoor, Fundamentals of Mathematical Statistics–Sultan Chand and Sons, Educational publishers, New Delhi,2003.

### COURSE OUT COMES:

The students will be able to

**CO1** : Calculate average, Median, Mode, Standard deviation of the given collection data.

**CO2** : Find the correlation between the two variables between -1 and +1.

**CO3** : Get conclusion (or) result.

**CO4** : Fitting of Binomial, Poisson and Normal distribution.

**CO5** : Find the Students t-distribution and Chi-square test for Goodness of fit.

### Question Paper Pattern

**ANSWER ALL THE QUESTIONS**

**1 X 15 = 15 Marks**

**2 x 20 = 40 Marks**

**Record = 5 Marks**

-----  
**Total = 60 Marks**  
-----

## NMEC – II MATHEMATICS FOR COMPETITIVE EXAMINATIONS - II

<b>Theory Hours</b>	<b>: 2</b>	<b>Course Code</b>	<b>:U21M4NME2:1</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives:

- 1 . To develop skills in aptitude and arithmetic for facing the competitive examinations
2. To learn and apply short tricks, tips and logical method on many difficult problems.
3. To solve problem in a fraction of minute using shortcut methods.

### UNIT - I

Simple Interest – Compound Interest.

### UNIT - II

Permutation and Combination – Probability.

### UNIT - III

Heights and Distances – Odd Man Out and Series.

### UNIT - IV

Tabulation – Bar Graphs.

### UNIT - V

Pie Charts – Line Graphs.

### TEXT BOOK:

- [1]. R.S Aggarwal, Quantitative aptitude, S. Chand and company Ltd., New Delhi,2008.

### REFERENCE(S) :

- [1]. B.S.Sijwali, quantitative aptitude Arihant Publications(india) Pvt Ltd 2007.
- [2]. Abhijit Guha, Quantitative Aptitude for Competitive Examinations, Mc Graw Hill Companies, 2006.
- [3]. Arora .P.N. and Arora.s. 2009, Quantitative Aptitude Mathematics: Volume-1,S.Chand and company Ltd
- [4]. Kothari. C.R.1989, Quantitative techniques,Vikas Publishing House Pvt Ltd.
- [5]. Srinivasan.T.M., Perumalswami.S. and gopala Krishnan.M.D., 1985 , Elements of Quantitative Techniques, Emerald Publishers.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Be apply easiest technique to solve simple interest and compound interest and its various types.
- CO2:** Explain and apply basic concept of probability.
- CO3:** To learn and apply short tricks and tips to Odd Man Out and Series.
- CO4:** To study Tabulation and Bar graphs.
- CO5:** Expose various types of Pie Charts – Line Graphs.

**Question Paper Pattern**

**Each units fifteen multiple choice questions for all topics:  $75 \times 1 = 75$**

## NMEC – II BIOSTATISTICS

<b>Theory Hours</b>	<b>: 2</b>	<b>Course Code</b>	<b>:U21M4NME2:2</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives:

- 1.To develop the skills in the area of problem solving in Biostatistics.
2. To solve the problem in mean, median, mode methods.

### UNIT - I

Biostatistics Introduction Definition and Scope – Collection of data – Primary and Secondary data,types of sampling random and stratified.

### UNIT - II

Processing of data: Classification and tabulation of data.

### UNIT - III

Organization of data, presentation of data – Diagramatic and graphical.

### UNIT - IV

Measures of Central tendency – Mean, Median,Mode.Measures of dispersion SD,SE variance &Cumulate variance

### UNIT - V

Common Statistical tools: Chi Square test, test of significance-ANOVA – One way Correlation and Regression, SPSS in brief.

### TEXT BOOK:

- [1]. P. Ramakrishnan, Biostatistics, saras publications.

### REFERENCE(S):

- [1]. Arora, P.N.1998 Biostatistics. Himalaya publishing House.

- [3]. Sokal R.J.and Rohlf S. J 1981 Introduction to Biostatistics, W. H Freeman, London.
- [4]. Zar,J.H Biostatistical analysis. 1983 McGraw Hill, London.

**COURSE OUTCOMES:**

The students will be able to

**CO1:** Study principle concepts about biostatistics.

**CO2:** Study data characteristics and form of distribution of data structure.

**CO3:** Understand the exact method of data analysis for the problem under investigation.

**CO4:** Gain knowledge about mean, median, mode, variance and cumulative variance.

**CO5:** Study chi square test, one way correlation and regression .

**Question Paper Pattern**

<b>Each unit fifteen multiple choice questions for all topics: 75 x 1 = 75</b>
--

## SEC – I INTERPERSONAL SKILL - THEORY

<b>Theory Hours</b>	<b>: 2</b>	<b>Course Code</b>	<b>:U214MASE1</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 2</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

- Unit - I**  
 The unit discusses the concept of interpersonal skills and its importance in the workplace. It covers the basic concepts of interpersonal skills and their application in the workplace. The unit also discusses the role of interpersonal skills in the workplace and the importance of communication skills.
- Unit - II**  
 This unit focuses on the concept of conflict resolution and its importance in the workplace. It discusses the different types of conflict and the various methods of conflict resolution. The unit also covers the role of conflict resolution in the workplace and the importance of communication skills.
- Unit - III**  
 This unit discusses the concept of team building and its importance in the workplace. It covers the different types of teams and the various methods of team building. The unit also discusses the role of team building in the workplace and the importance of communication skills.
- Unit - IV**  
 This unit focuses on the concept of leadership and its importance in the workplace. It discusses the different types of leadership and the various methods of leadership. The unit also covers the role of leadership in the workplace and the importance of communication skills.
- Unit - V**  
 This unit discusses the concept of organizational culture and its importance in the workplace. It covers the different types of organizational culture and the various methods of organizational culture. The unit also discusses the role of organizational culture in the workplace and the importance of communication skills.

### Question Paper Pattern

**Each unit Fifteen marks question for all topics: 5 x 15 = 75**

## CC- IX ABSTRACT ALGEBRA

<b>Theory Hours</b>	<b>: 6</b>	<b>Course Code</b>	<b>: U21MC509</b>
---------------------	------------	--------------------	-------------------

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To study the various algebraic structures of Mathematics including sets, groups.
2. To develop the Rings, maximal and prime ideals through the concept of groups.

**UNIT - I Groups**

Groups – Introduction – Definition and Examples – Elementary Properties of a Group – Equivalent Definitions of group – Permutation Group -Subgroups – Cyclic groups – Order of an element.

**UNIT - II**

Cosets and Lagrange's theorem - Normal subgroups and Quotient groups – Isomorphisms – Homomorphisms .

**UNIT - III Rings**

Definition and Examples – Elementary Properties of rings – Isomorphism – Types of rings –Characteristic of a ring – Subrings.

**UNIT - IV**

Ideals – Quotient rings – Maximal and prime ideals – Homomorphism of rings – Field of quotients of an integral domain – Ordered integral domain.

**UNIT - V**

Unique factorization domain(U.F.D) – Euclidean domain – Every P.I.D. is a U.F.D. – Polynomial Rings – Polynomial Rings over U.F.D. – Polynomials over  $\mathbb{Q}$ .

**TEXT BOOK :**

- [1] S. Arumugam and A. Thangapandi Isaac, Modern Algebra , Scitech publications (India) PVT, Ltd – 2004 1<sup>st</sup> print .

- UNIT I** : Chapter 3 ( sections 3.0 to 3.7 )  
**UNIT II** : Chapter 3 ( sections 3.8 to 3.11 )  
**UNIT III** : Chapter 4 ( sections 4.1 to 4.6 )  
**UNIT IV** : Chapter 4 ( sections 4.7 to 4.12 )  
**UNIT V** : Chapter 4 ( sections 4.13 to 4.18)

**REFERENCE (S):**

- [3] S.G. Venkatachalapathy, Modern Algebra, Margham Publications, 2008.
- [4] I.N. Herstein, Topics in Algebra, John wiley and sons, New York, 2003.

### **COURSE OUTCOMES:**

The students will be able to

- CO1:** Classify and apply the Groups, Permutation groups and their properties.
- CO2:** Identify different algebraic structures, isomorphic and Homomorphism structure.
- CO3:** Understands the fundamental concepts of the algebraic structures such as Rings and subrings.
- CO4:** Understand Ideals, quotient rings and Homomorphism of rings.
- CO5:** Learn about various concepts of Unique factorization domain and Polynomial rings.

### **Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total**    =    75

## **CC – X REAL ANALYSIS**

**Theory Hours**        : 5  
**Practical Hours**    : -

**Course Code**        : U21MC510  
**Credits**                : 5

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To study the real number system & properties of various functions defined on the real line.
2. To give application of Real analysis.

**UNIT – I**

Sets and functions : sets and elements – Operations on sets – Functions – Real valued functions – Equivalence, countability – Real numbers – Least upper bounds.

**UNIT – II**

Limits and metric spaces : Limit of a function on the real line – Metric spaces – Limits in metric spaces.

**UNIT – III**

Continuous functions on metric spaces : Functions continuous at a point on the real line – Reformulation – Functions continuous on metric space – Open sets – Closed sets.

**UNIT – IV**

Calculus: sets of measure zero – Definition of the Riemann integral – Existence of the Riemann integral – Properties of the Riemann integral – Derivatives – Rolle’s theorem – The law of the mean – Fundamental theorem of calculus.

**UNIT – V**

Taylor series : Taylor’s theorem – The binomial theorem – L’Hospital’s rule

**TEXT BOOK :**

- [1] RICHARD R.GOLDBERG, Methods of Real Analysis,  
Oxford and IBHP Publishing co, Pvt., Ltd.,New  
Delhi,1970.

**UNIT – I** : Chapter 1 (sections 1.1 to 1.7)

**UNIT - II** : Chapter 4 (sections 4.1 to 4.3)

**UNIT – III** : Chapter 5 (sections 5.1 to 5.5)

**UNIT – IV** : Chapter 7 (sections 7.1 to 7.8)

**UNIT - V** : Chapter 8 (sections 8.5 to8.7)

**REFERENCE(S) :**

- [1] M.K. Singal and Asha Rani Singal , A First course in RealAnalysis,

R. Chand and Co, publishers, New Delhi,2003.

- [2] Shanthi Narayanan, A Course of Mathematical Analysis,  
S.Chand and Co,1995.

**COURSE OUT COMES:**

The students will be able to

**CO1:** Apply mathematical concepts and principles to perform numerical and symbol computations.

**CO2:** Use technology appropriately to investigate and solve mathematical problems.

**CO3:** To recognize mathematics related problems, assess their solvability and solve them within a specified time frame.

**CO4:** Analysis Riemann integral derivatives and fundamental theorem of calculus.

**CO5:** Understand Taylor's theorem and Binomial theorem concept.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total** = 75  
-----

**CC – XI MECHANICS**

**Theory Hours : 5** **Course Code : U21MC511**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives:

1. To determine the resultant of system of forces.
2. To develop the knowledge and understanding of the fundamental concepts in statics of momentum and angular momentum.
3. To give enough working knowledge to handle practical problems.

### UNIT - I

**Force:** Resultant of two forces on a particle – Three forces related to a triangle – Resultant of several forces – Equilibrium of a particle under three or more forces .

### UNIT - II

**Force on a rigid body:** Moment of a force – Equivalent system of forces –parallel forces – Varignon’s Theorem – Forces along the side of a triangle – Couples – Resultant of several co-planar forces – Equation of line of action of the resultant - Equilibrium of a rigid body under three coplanar forces – Reduction of a coplanar forces into a force and a couple.

### UNIT - III

Types of forces – Friction – Laws of Friction – Coefficient of Friction, Angle and Cone of Friction – Limiting equilibrium of a particle on a Inclined plane – Tilting of a body – Simple Problems.

### UNIT - IV

**Kinematics :** Velocity – Relative Velocity – Acceleration – Coplanar Motion – Newton’s Laws of Motion – Forces.

### UNIT - V

Simple Harmonic motion – Simple Pendulum – Projectile – Maximum height reached, ranges, time of flight – Projectile up/down an inclined plane.

### TEXT BOOK :

- [1] Mechanics - P.Duraipandiyar, Laxmi Duraipandiyar,(Vector Treatment), S.Chand and Co,Reprint - 2013 .

**UNIT I** : Chapter 2 (section 2.2) and Chapter 3 (section 3.1)

**UNIT II** : Chapter 4 (sections 4.1 , 4.3 to 4.9) and Chapter 5 (section 5.1 )

**UNIT III** : Chapter 2 (section 2.1.2) and Chapter 3 (section 3.2 ) and

Chapter 5 (section 5.2 )

**UNIT IV** : Chapter 1 and Chapter2(section 2.1.1)

**UNIT V** : Chapter 12(section 12.1 to 12.3) ,Chapter15 (section 15.6) and chapter 13

**REFERENCE (S):**

[1] M.K.Venkataraman, Statics, Agasthiyar Publications, 2002.

[2] A.V . Dharmapadham, Statics, S.Viswanathan Publishers Pvt., Ltd.,

[3] S.L .Lony ,Elements of Statics and Dynamics, Part – I,. A.I.T. Publishers, 1991.

**COURSE OUTCOMES:**

The students will be able to

**CO1:** Get the knowledge about forces help the students in daily life.

**CO2:** Understand the concepts of force with moment of a force, Reduction of coplanar forces into a force and couple.

**CO3:** Deep analyzing the laws of Friction.

**CO4:** Understand kinematics such as relative velocity, components of velocity and acceleration. Learn about Newton’s Laws of motion.

**CO5:** Find out the various properties of simple harmonic motion, simple pendulum & projectile.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**CC-XII DIFFERENTIAL EQUATIONS**

**Theory Hours**

**: 5**

**Course Code**

**: U21MC512**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To expose the students to various techniques of integration.
2. To study differential equations and partial differential equations of first and second order.
3. To study the techniques of finding Laplace transforms and inverse Laplace transforms and real functions and their application in solving ordinary differential equations.

**UNIT - I**

**Differential Equations of the first order:** Definitions – Solutions of Differential Equations – Equations of the first order and the first degree – Variables Separable – Homogeneous Equations – Non-Homogeneous Equations of the first degree in X and Y – Linear Equations – Bernoulli’s Equations – Exact Differential Equations – Sufficient Conditions – Rule for Solving an Exact Differential Equations – Rules for Integrating Factors - Equations Solvable of p – Equations Solvable for y – Equations solvable for x – Clairaut’s Form.

**UNIT - II**

**Linear Differential equations with constant coefficients:** The operators D and  $D^{-1}$  – Particular integral – Special methods of finding particular integral – Linear equations with variable coefficients – Find the particular integral – Equations reducible to the linear homogeneous equation.

**UNIT - III**

**Simultaneous Differential equations:** Simultaneous of the first order and first degree – Solution of  $dx/P = dy/Q = dz/R$  – Methods for solving  $dx/P = dy/Q = dz/R$  - Geometrical interpretation of  $dx/P = dy/Q = dz/R$  – Total Differential equations rules for Integrating  $Pdx + Qdy + Rdz = 0$ .

**UNIT - IV**

**Partial Differential Equations:** Derivation of Partial Differential Equations – Elimination of arbitrary Constants – Elimination of arbitrary Functions – Different integrals of partial differential Equations – Solutions of PDE in some simple cases.

**UNIT - V**

Standard types of first order Equations – Types I, II, III, IV – Lagrange’s Equation – Charpit’s Method – Standard I, II, III, IV.

**TEXT BOOKS:**

- [1] S. Narayanan and T.K. Manickavasagam Pillai, Calculus volume– III  
S.Viswanathan (Printers and Publishers), Pvt. Ltd. 2011.

- UNIT I** : Chapter 1 (sections 1.1, 1.2, 1.2.0 – 1.2.5, 1.3.1 - 1.3.3, 1.4, 1.5.1 - 1.5.5, 1.6.1)
- UNIT II** : Chapter 2 (sections 2.1, 2.1.2, 2.2 - 2.4, 2.8, 2.8.1 - 2.8.3, 2.9)
- UNIT III** : Chapter 3 (sections 3.1 - 3.5, 3.7, 3.7.2 - 3.7.4)
- UNIT IV** : Chapter 4 (sections 4.1, 4.2, 4.2.1 - 4.2.3, 4.4)
- UNIT V** : Chapter 4 (sections 4.5, 4.5.1 - 4.5.5, 4.6, 4.6.1, 4.7, 4.7.1 )

**REFERENCE(S):**

- [4] Arumugam Issac, Allied Mathematics, New Gamma Publishing house, 2007.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Evaluate first order differential equations including separable, homogeneous, exact and linear.
- CO2:** Identify the type of given differential equations and select and apply the appropriate analytical techniques for finding the solution of first order and second higher order differential equations.
- CO3:** Solve non homogeneous equations.
- CO4:** Solve first order differential equations utilizing the standard techniques for separable, exact, linear, homogeneous or Bernoulli cases.
- CO5:** Solve higher order differential equations using reduction of order, undermine coefficients or variation of parameters.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C** :  $3 \times 5 = 30$  (Each Unit Carries One Questions )

**MBEC - I OPERATIONS RESEARCH**

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U21M5MBE1:1</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives :**

1. To introduce the field of operations research which has many applications in management techniques.
2. To help students to find optimum solutions in business and management problems.
3. To develop scientific ability.

**UNIT - I**

**Linear Programming Problem:** Introduction – Mathematical Formulation of the problem – Graphical Solution Method – Simplex method – Big (M) Method.

**UNIT - II**

**Transportation Problem:** Introduction – North west corner rule – Least cost method – Vogel’s approximation Method – MODI Method – Assignment problems.

**UNIT - III**

**Sequencing Problems:** Introduction – Problem of sequencing – Basic term used in sequencing – Processing n Jobs through 2 machines – Processing n Jobs through k machines – Processing 2 Jobs through k machines.

**UNIT - IV**

**Replacement Problems:** Introduction – Replacement of Equipment / asset that Deteriorates Gradually – Replacement of Equipment that fails suddenly.

**UNIT - V**

**Network scheduling by PERT/CPM:** Introduction – Network and basic components – Rules of network construction – Critical path analysis – Probability consideration in PERT – Distinction between PERT and CPM.

**TEXT BOOK :**

- [1]. Operations Research – Kanti Swarub, P.K.Gupta, Man Mohan. Sultan Chan & Sons Educational Publishers New Delhi, Sixteenth thoroughly Revised Edition Reprint – 2014.

**UNIT I** : Chapter 2 ( sections 2.1, 2.3 )  
Chapter 3 (sections 3.1, 3.2)  
Chapter 4 ( sections 4.1, 4.4)

**UNIT II** : Chapter 10 (sections 10.1, 10.2, 10.8,10.9, 10.13)

- Chapter 11 (sections 11.1, 11.2, 11.3, 11.4)
- UNIT III** : Chapter 12 (sections 12.1 to 12.6)
- UNIT IV** : Chapter 18 (sections 18.1 to 18.3)
- UNIT V** : Chapter 25 (sections 25.1, 25.2 , 25.4, 25.6, 25.7, 25.8).

**REFERENCE(S):**

- [3]. Kanti Swarup, P.K. Gupta and Man Mohan, Operations Research (Sultan chand and sons).

**COURSE OUT COMES:**

The students will be able to

- CO1:** Learn mathematical techniques that will help them to understand and analyze managerial problems in industry so that resources (Capitals, Materials, staffing and machines) may be utilized more effectively.
- CO2:** Use mathematical software to solve the Transportation Problems.
- CO3:** Identify and develop operational research models from the verbal description of the real system.
- CO4:** Solve the replacement problem.
- CO5:** Understand the Network scheduling of PERT/CPM method.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**MBEC – I MATHEMATICAL MODELLING**

**Theory Hours**

**: 5**

**Course Code : U21M5MBE1:2**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To introduce the basic concepts of modeling.
2. To study the different mathematical models involving differential equations, graph theory etc.

**UNIT - I**

Mathematical Modelling through Ordinary Differential Equations of First Order: Linear Growth and Decay Models – Non-Linear Growth and Decay Models – Compartment Models – Dynamics problems – Geometrical problems.

**UNIT - II**

Mathematical Modelling through system of Ordinary Differential Equations of First Order: Population Dynamics-Epidemics – Compartment Models – Economics –Medicine, Arms Race, Battles and International Trade – Dynamics.

**UNIT - III**

Mathematical Modelling through Ordinary Differential Equations of Second Order: Planetary Motions – Circular Motion and Motion of Satellites – Mathematical Modelling through Linear Differential Equations of Second order – Miscellaneous Mathematical Models.

**UNIT - IV**

Mathematical Modelling through Difference Equations: Simple Models – Basic theory of Linear Difference Equations with Constant Coefficients – Economics and Finance – Population Dynamics and Genetics – Probability Theory.

**UNIT - V**

Mathematical Modelling through Graphs: Solutions that can be Modelled through Graphs – Mathematical Modelling in terms of Directed Graphs, Signed Graphs, Weighted Digraphs and Unoriented Graphs.

**TEXT BOOK:**

[1] J.N. Kapur, Mathematical Modelling , Wiley Eastern Limited , New Delhi,1988.

## REFERENCE(S):

- [1]. J.N. Kapur, Mathematical Models in Biology and Medicine, Affiliated East-West Press Limited, New Delhi, 1981.
- [2]. Bimal K. Mishra and Dipak satpathi, Mathematical modeling, Ane books Pvt,Ltd.,2007.

## COURSE OUTCOMES:

The students will be able to

- CO1:** Understand the concept of a mathematical model and explain the series of steps involved in mathematical modeling.
- CO2:** Classify different classes of mathematical models.
- CO3:** Discuss features of a good model and the benefit of using a mathematical model.
- CO4:** Identify some simple real – life problems that can be solved using mathematical models.
- CO5 :** Convert the physical problems as differential equations through mathematical modeling.

## Question Paper Pattern

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

## MBEC –I SPECIAL FUNCTIONS

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U21M5MBE1:3</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To learn different techniques for solving differential equations.
2. To familiarize the students to applications in other branches of Mathematics such as Quantum Mechanics, Electro-Static problems, Structure of Hydrogen atom, Nuclear Physics, etc.,.

**UNIT - I**

The Integral Test and Euler's constant - Bernoulli functions and Numbers - The Euler-Maclaurin Formulas - The Stirling formulas.

**UNIT - II**

The Gamma Function: Definition and Basic properties - The Beta Function, Walli's product - The Reflection Formula - Stirling and Weierstrass.

**UNIT - III**

Elliptic Integrals and Elliptic Functions: Motivational Examples - General Definition of Elliptic Integrals - Evaluation of Elliptic Integrals - The Jacobian Elliptic Function - Addition Theorems.

**UNIT - IV**

Zeros, Poles and Period Parallelograms - General Elliptic Functions - Weierstrass' P-Function - Elliptic Functions in terms of P and P'.

**UNIT - V**

Orthogonal Functions: Generating Functions - Orthogonality - Series Expansions.

**TEXT BOOKS:**

1. Special Functions by Leon M. Hall, Professor of Mathematics, University of Missouri - Rolla.

**Unit I** : Chapter 1 (Sec 1.1,1.3,1.4,1.5)

**Unit II** :Chapter 2 (Sec 2.1 to 2.4)

**Unit III** : Chapter3 (Sec 3.1 to 3.5)

**Unit IV**: Chapter4 (Sec 3.7 to 3.10)

**Unit V** : Chapter5 (Sec 5.1to5.3).

**REFERENCE(S):**

1. Differential equations and calculus of variations by L.Els golts.

2. Differential equations- Diwan and Agashe.

3. Advanced calculus of Applications by F.b.Hilder Brandt.

**COURSE OUTCOMES:**

The students will be able to

**CO1:** Understand the concept of the Bernoulli functions and Numbers

**CO2:** Solve the basic properties and the beta function, wallis'product.

**CO3:** Discuss general definition of elliptic integrals and addition theorem.

**CO4:** Classify the zeros, poles, and period parallelograms and weierstrass''p – function.

**CO5 :** Explain the generating functions and orthogonality, series expansions.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SEC – II OFFICE MANAGEMENT - THEORY**

**Theory hours : 2**  
**Practical hours : -**  
**Exam hours : 3**

**Course Code :U215MASE2**  
**Credits : 2**  
**Internal : 25**  
**External : 75**

### **UNIT - I**

Office management – meaning – Elements of office management -Functions of Office management.

### **UNIT - II**

Office accommodation and layout- factors influencing location – Principles of office layout – Office environment.

### **UNIT - III**

Office records management –importance - Filing essentials – classification of files – modern filing devices.

### **UNIT - IV**

Office machines – Objectives of introducing office machines – Principles for selection of office machines – advantages and disadvantages.

### **UNIT - V**

Types of office machines –Duplicators - calculating machines – addressing machine – franking machine.

### **Question Paper Pattern**

**Each unit Fifteen marks question for all topics: 5 x 15 = 75**

**Theory hours : 2**  
**Practical hours : -**  
**Exam hours : 3**

**Course Code :U215MASE2**  
**Credits : 2**  
**Internal : 25**  
**External : 75**

**Unit - I**

Definition of Office Communication - Importance of Office Communication - Types of Office Communication - Channels of Office Communication - Barriers to Office Communication.

**Unit - II**

Definition of Business Letters - Characteristics of Business Letters - Types of Business Letters - Writing Business Letters - Elements of Business Letters - Importance of Business Letters.

**Unit - III**

Definition of Office Memorandum - Characteristics of Office Memorandum - Types of Office Memorandum - Writing Office Memorandum - Elements of Office Memorandum - Importance of Office Memorandum.

**Unit - IV**

Definition of Office Order - Characteristics of Office Order - Types of Office Order - Writing Office Order - Elements of Office Order - Importance of Office Order.

**Unit - V**

Definition of Office Report - Characteristics of Office Report - Types of Office Report - Writing Office Report - Elements of Office Report - Importance of Office Report.

**Question Paper Pattern**

**Each unit Fifteen marks question for all topics: 5 x 15 = 75**

**Theory hours : 2**  
**Practical hours : -**  
**Exam hours : 3**

**Course Code :U215MASE3**  
**Credits : 2**  
**Internal : 25**  
**External : 75**

### **UNIT - I**

Communication – meaning and definition – medium of communication – Barriers to communication.

### **UNIT - II**

Office communication – methods of office communication – internal and external communication – mailing – handling of mail – procedure for inwards mail and outwards mail.

### **UNIT - III**

Office forms – meaning purpose of forms – types – advantages – factors to be considered in designing office forms.

### **UNIT - IV**

Office report writing – meaning – advantages – characteristics of a good report – classification of reports.

### **UNIT - V**

Collection and recording of data – factors to be considered for collection of data – sources of data – recording of data.

### **Question Paper Pattern**

**Each unit Fifteen marks question for all topics: 5 x 15 = 75**

**SEC – III** □□□□□ □□□□□ □□□□□□□

<b>Theory hours : 2</b>	<b>Course Code :U215MASE3</b>
<b>Practical hours :</b>	<b>Credits : 2</b>
<b>Exam hours :</b>	<b>Internal : 25</b>
	<b>External : 75</b>

**Unit - I**

Introduction to Mathematics, Numbers - Fractions - Decimals - Percentages.

**Unit - II**

Algebra - Linear Equations in One Variable - Linear Equations in Two Variables - Quadratic Equations in One Variable - Arithmetic Progressions - Geometric Progressions.

**Unit - III**

Coordinate Geometry - Lines and Angles - Triangles - Congruence - Heron's Formula - Area and Perimeter of Similar Figures and Solids.

**Unit - IV**

Probability - Statistics - Mean, Median, Mode - Graphical Representation of Data.

**Unit - V**

Mathematical Reasoning - Logical Reasoning - Mathematical Induction - Combinatorics - Probability.

**Question Paper Pattern**

<b>Each unit Fifteen marks question for all topics: 5 x 15 = 75</b>

**SEC-III MATHEMATICAL REASONING –THEORY**

<b>Theory Hours : 2</b>	<b>Course Code : U215MASE3</b>
<b>Practical Hours : -</b>	<b>Credits : 2</b>
<b>Exam Hours : 3</b>	<b>Internal : 25</b>
	<b>External : 75</b>

## **Objectives:**

1. To developing logical thinking and mathematical reasoning.
2. To make a logical deduction of important tool for any sequential programming.

## **UNIT - I**

Blood relation – Deciphering jumbled up descriptions, Relation puzzle and coded relations.

## **UNIT - II**

Coding and Decoding – Letter decoding, Direct letter coding, Number/symbol coding – Matrix coding – Substitution – Deciphering message word codes – Deciphering number and symbol codes for messages – Jumbled coding.

## **UNIT - III**

Puzzle test: Classification type – Seating/ placing arrangements – Comparison type - Sequential order of things - Selection based on given conditions – Family based puzzles.

## **UNIT - IV**

Logical deduction – Arguments – Assumptions – Course of Actions- Conclusions.

## **UNIT - V**

Deriving conclusions from passages – Theme deduction – Cause and effect reasoning.

## **TEXT BOOK(S):**

1. Aggarwal, R. S, A Modern Approach to verbal & non-verbal reasoning,  
S. Chand & company Ltd., 2006.

**Unit 1** : section 1: 5

**Unit 1** : section 1: 4

**Unit 1** : section 1: 6

**Unit 1** : section 2: 1,2,3,4,5

**Unit 1** : section 2: 6,7,8.

## **REFERENCE(S):**

- [1]. Aggarwal, R. S. A Modern Approach to verbal reasoning, S. Chand & company Ltd., 2006.

- [2]. Aggarwal, R. S. A Modern Approach to non- verbal reasoning, S. chand & company Ltd., 2006.
- [3]. Aggarwal, R. S. A Modern Approach to logical reasoning, S. Chand & company Ltd., 2006.

### **COURSE OUTCOMES:**

The students will be able to

- CO1:** Predict the Relation puzzle and coded relations.
- CO2:** Understand the relation with Coding and Decoding.
- CO3:** Analyze the puzzles and family based puzzles .
- CO4:** Use logical deductions to verify the validity of the conclusion.
- CO5:** Differentiate cause and effect, derive conclusions from passage.

### **Question Paper Pattern**

**Each unit fifteen multiple choice questions for all topics:  $75 \times 1 = 75$**

## **CC – XIII COMPLEX ANALYSIS**

<b>Theory Hours</b>	<b>: 6</b>	<b>Course Code</b>	<b>: U21MC613</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To introduce the theory of complex variable which is different from analysis of real variable.
2. To learn the properties of complex valued function defined on the set of Complex numbers.
3. To introduce the concept of complex integration and its properties.

**UNIT - I**

Functions of a complex variable – Limits – Theorems on Limits – Continuous functions – Differentiability – Cauchy - Riemann equations – Analytic functions – Harmonic functions.

**UNIT - II**

Elementary transformations – Bilinear transformations – Cross ratio – Fixed points of Bilinear transformations – Some special bilinear transformations.

**UNIT - III**

Complex Integration: Definite integral – Cauchy's theorem – Cauchy's integral formula – Higher derivatives.

**UNIT - IV**

Series Expansions: Taylor's series – Laurent's series – Zeros of analytical functions – Singularities.

**UNIT - V**

Residues – Cauchy's Residue theorem – Evaluation of definite integrals.

**TEXT BOOK:**

- [1] S.Arumugam, A.Thangapandi Isaac and A.Somasundaram, Complex Analysis, New Scitech publications (India) Pvt.Ltd. November 2003.

- UNIT I** : Chapter 2 (sections 2.1 to 2.8)  
**UNIT II** : Chapter 3 (sections 3.1 to 3.5)  
**UNIT III** : Chapter 6 (sections 6.1 to 6.4)  
**UNIT IV** : Chapter 7 (sections 7.1 to 7.4)  
**UNIT V** : Chapter 8 (sections 8.1 to 8.3)

**REFERENCE(S)**

- [3] T.k. Manickavachagam Pillai, Complex Analysis, S.Viswanathan Publishers pvt.  
Ltd.1994.

**COURSE OUT COMES:**

The students will be able to

- CO1 :** Understand the significance of differentiability and analytical of complex function leading to the Cauchy-Riemann equations.
- CO2 :** Solve analytic function as a mapping on the plane, Mobius or bilinear transformation.
- CO3:** Learn the role on Cauchy theorem and Cauchy's integral formulas in evaluation of closed integrals. Apply Cauchy Inequality, Liouville's theorem, Fundamental theorem of algebra and Morera's theorem.
- CO4:** Learn Taylor's series and Laurent's series expansion of analytic function.
- CO5:** Classify the nature of singularity, poles and Residues and application of Cauchy's Residue theorem.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total**    =    75

**CC - XIV GRAPH THEORY**

**Theory Hours** : 6  
**Practical Hours** : -  
**Exam Hours** : 3

**Course Code** : U21MC614  
**Credits** : 5  
**Internal** : 25  
**External** : 75

**Objectives:**

1. Be familiar with the most fundamental graph theory topics and results.
2. Be exposed to the techniques of proofs and analysis.

**UNIT - I**

Definition of a graph, application of a graph – Finite and infinite graphs – Incidence and degree – Isolated, pendant vertices and Null graph – Isomorphism – Sub graphs – walks, Paths and circuits – connected and disconnected graphs and components – Euler graphs – Operations on Graphs – More on Euler graphs – Hamiltonian paths and Circuits.

**UNIT - II**

Trees – Properties of trees – Pendant vertices in a Tree – Distance and centres in a Tree – Rooted and Binary Trees – Spanning Trees – Fundamental Circuits.

**UNIT - III**

Cut - sets – Properties of a Cut-set – All cut - sets in a graph Fundamental circuits and Cut sets – Connectivity and separability.

**UNIT - IV**

Vector Spaces of a Graph – Sets with one, two operations – Modular arithmetic –Galois Fields – Vectors and Vectors Spaces – Vector Space Associated with a Graph –Basis vectors of a graph – circuit and cut-set subspaces – Orthogonal vectors and Spaces.

**UNIT - V**

Matrix representation of graphs – Incidence matrix – Circuit Matrix – Fundamental Circuit Matrix and rank of B – Cut-set matrix - Chromatic Number – Chromatic partitioning – Chromatic polynomial.

**TEXT BOOK:**

- [1] Narsingh Deo, Graph Theory with applications to Engineering and Computer Science, Prentice Hall of India Pvt Ltd., New Delhi, Reprint 2004.

**UNIT I** : Chapter 1 (sections 1.1 to 1.5 ) and  
Chapter 2 (sections 2.1 , 2.2 , 2.4 to 2.9)  
**UNIT II** : Chapter 3 (sections 3.1 to 3.5, 3.7 , 3.8 )

- UNIT III** : Chapter 4 (sections 4.1 to 4.5)  
**UNIT IV** : Chapter 6 (sections 6.1 to 6.8)  
**UNIT V** : Chapter 7 (sections 7.1 , 7.3 , 7.4 , 7.6) and  
 Chapter 8 (sections 8.1 to 8.3 ).

 Publishing company,1995.  
 [4] G.Chartrand, Linda Lesniak and Ping zhang, Graphs and Digraphs, Fifth Edition, CRC  
 press, 2011.

**COURSE OUTCOMES:**

The student will be able to

- CO1:** Define basic notions in graph theory and account for the theory of paths and the  
 degree of connectedness of a graph.  
**CO2:** Account the basic properties of trees and fundamental circuits.  
**CO3:** After learning the course the students should be able to solve problems involving vertex  
 connectivity, edge connectivity.  
**CO4:** Define the vector spaces of a graph and Galois fields.  
**CO5:** Understand the matrix representation of graphs.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**CC - XV LINEAR ALGEBRA**

**Theory Hours**

**: 6**

**Course Code**

**: U21MC615**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. Know the various algebraic structures of Mathematics including sets, groups.
2. Learn about vector spaces, span of a set and linear independence.
3. Develop an analytic thinking in the concept of linear equations..

**UNIT - I Vector Spaces:**

Introduction – Definition and Examples – Subspaces – Linear Transformation.

**UNIT - II**

Span of a set – Linear Independence – Basis and Dimension – Rank and Nullity – Matrix of a Linear Transformation.

**UNIT - III Inner Product Spaces:**

Introduction - Definition and Examples – Orthogonality – Orthogonal Complement.

**UNIT IV Theory of Matrices:**

Introduction – Algebra of Matrices – Types of Matrices – The Inverse of a Matrix – Elementary Transformations.

**UNIT - V**

Rank of a Matrix – Simultaneous Linear Equations – Characteristic Equation And Cayley Hamilton Theorem – Eigen Values And Eigen Vectors.

**TEXT BOOK :**

### **COURSE OUTCOMES:**

The students will be able to

**CO1:** Identify the concepts of vector spaces in linear transformations and their properties.

**CO2:** Learn about the rank and nullity of linear transformations.

**CO3:** Understand the basic concepts of orthogonal complement.

**CO4:** Apply the basic concepts of types of matrices.

**CO5:** Learn the role on Cayley Hamilton theorem and solve the problems in eigen values and eigen vectors.

### **Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

## **MBEC – II NUMERICAL ANALYSIS**

**Theory Hours**     : 6  
**Practical Hours**   : -

**Course Code** : U21M6MBE2:1  
**Credits**       : 5

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To develop the mathematical skills of the students in the areas of numerical methods.
2. To provide the student with numerical methods of solving the Interpolation, differentiation and integration.
3. This course is an introduction to broad range of numerical methods for solving mathematical problems that arise in science and engineering.

**UNIT - I**

Algebraic and Transcendental equations – Finding the solution of the given equation using bisection method, Method of false position, Newton-Raphson method, Iteration method.

**UNIT - II**

Finite differences – Forward, Backward and central differences – Newton’s Forward and backward difference interpolation formulae – Interpolation with unevenly spaced points – Lagrange’s interpolation formula.

**UNIT - III**

Numerical Integration - Using Trapezoidal rule and simpson’s 1/3 and 3/8 - rules.

**UNIT - IV**

Solution to Linear systems – Gauss Elimination method – Jacobi and Gauss Siedal iterative methods.

**UNIT - V**

Numerical solution of ODE – Solution by Taylor’s series method, Picard’s method, Euler’s method, Runge-kutta second and fourth order methods.

**TEXTBOOK :**

[1] S.S Sastry, Introductory methods of Numerical Analysis, Prentices Hall of India Pvt.Limited,2001,Third Edition.

**UNIT I** : Chapter 2 (sections 2.2, 2.3, 2.4, 2.5)

**UNIT II** : Chapter 3 (sections 3.3.1, 3.3.2, 3.3.3, 3.6, 3.9, 3.9.1)

**UNIT III** : Chapter 5 (sections 5.4, 5.4.1, 5.4.2, 5.4.3)

**UNIT IV** : Chapter 6 (sections 6.3, 6.3.2) and  
Chapter 8 (sections 8.3.1 , 8.3.2)

**UNIT V** : Chapter 7 (sections 7.1, 7.2, 7.3, 7.4,7.5).

**REFERENCE(S):**

[3] E. Kendall, Atkinson, An Introduction to Numerical Analysis, II Edition, John wiley& Sons, 1989.

### **COURSE OUTCOME:**

The students will be able to

**CO1:** Learn the numerical methods to find our solution of algebraic equations using different methods.

**CO2:** Understand the various interpolation methods and finite difference concepts.

**CO3:** Apply numerical methods to obtain approximate solutions to mathematical problems.

**CO4:** Work numerically on the ordinary differential equations using different methods through the theory of finite differences.

**CO5:** Apply Taylor series and Runge kutta methods to find the solution of the equations.

### **Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

## **MBEC – II OBJECT ORIENTED PROGRAMMING IN C++**

**Theory Hours**

**: 6**

**Course Code : U21M6MBE2:2**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 5</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### **Objectives:**

1. To introduce programming style that is associated with the concepts of class, object and other concepts revolving around these two, like inheritance and polymorphism.
2. To realize object oriented programming is a vast improvement over procedural programs.

### **UNIT - I**

Programming Paradigms – Introduction to OOP – Advantages of OOP - Characteristics of OOP language – Overview of C++ - C++ programming basics – Function: simple Functions – Call by value – Call by reference – Returning values of different type – Function overloading – inline functions – Default arguments – Recursive function.

### **UNIT - II**

Class – Objects – Constructors – Destructors – Objects as function arguments - Returning object from functions – Structures and Classes – Static data - Static function – Array of objects.

### **UNIT - III**

Access specifiers – Friend function – Friend class – Operator over loading –Type casting –Pointer–Template.

### **UNIT - IV**

Inheritance – Derived class constructors – Class hierarchies – Types of inheritance – Virtual base class – Function overriding – Virtual functions- Pure virtual unctions - Abstract class.

### **UNIT - V**

Files and Streams : I/O manipulators – Streams – Error handling during file operations string I/O - Character I/O - Object I/O – I/O with multiple objects – File pointers - Disk I/O with member functions.

### **TEXT BOOK:**

- [1]. Robert Lafore, Object oriented Programming in Microsoft C++, Galgotia Publication New Delhi, 2000.

**UNIT I** : Chapter 1,2 and 3.

**UNIT II** : Chapter 4 and 5.

**UNIT III** : Chapter 6 and 7.

**UNIT IV** : Chapter 9 and 10.

**UNIT V** : Chapter 11 and 12.

**REFERENCES (S):**

**COURSE OUTCOMES:**

Students will be able to

**CO1** : Understand that objects oriented programs are organized around objects, which contain both data and functions that data and a class is a template for of objects.

**CO2** : Study how Inheritance allows a class to be derived from an existing class without modifying it.

**CO3** : Explain the concepts of operator overloading, type casting pointers and work on templates.

**CO4** : Identify classes hierarchies and type of inheritance.

**CO5** : Have a Working knowledge of disk I/O operations with member functions.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C** :  $3 \times 5 = 30$  (Each Unit Carries One Questions )

**MBEC – II NUMBER THEORY**

**Theory Hours**      : 6  
**Practical Hours**    : -

**Course Code** : U21M6MBE2:3  
**Credits**        : 5

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To highlight the niceties and nuances in the world of numbers.
2. To prepare the students for coding through congruences.

**UNIT - I**

Divisibility: Associates-Division Algorithm- gcd (HCF)- Euclidean Algorithm – Least common multiple (LCM).

**UNIT - II**

Prime and composite numbers: Coprime- sieve of Eratosthenes- Euclid's Theorem- Unique Factorisation- Fundamental Theorem of Arithmetic- Positional Representation of Integers.

**UNIT - III**

Arithmetic functions- Perfect Numbers – Euclid Theorem on perfect numbers- Euler's Function  $\phi(n)$  with examples

**UNIT - IV**

Distribution of primes: Fermat conjecture – Fermat Numbers- Gold Bach's Conjecture – Mersenne Numbers with examples

**UNIT - V**

Algebraic congruences: Factor Theorem for polynomials- Number of Solutions- Congruences of Prime power moduli- Composite Moduli- Identical congruences – conditional congruences – multiple roots.

**TEXT BOOK:**

Kumaravelu Susheela Kumaravelu, Elements of Number of Theory.

Unit I : Chapter 1 (Sec 61 to 76)

Unit II :Chapter 2 (Sec 77 to 91)

Unit III : Chapter3 (Sec 95 to 99, Sec 104 to 108)

Unit IV : Chapter4 (Sec 144 to 148)

Unit V : Chapter5 (Sec 216 to 228)

**REFERENCE BOOK:**

2. Elementary Number Theory, Allyn and Bacon Inc., Boston, 1980.
3. Introduction to Analytic Number Theory, Tom.M.Apostal, Narosa Publishing House, New Delhi, 1989.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Understand the concept of the division algorithm and Euclidean algorithm.
- CO2:** Discuss the fundamental theorem of arithmetic.
- CO3:** Classify the perfect number and Euclid theorem on perfect numbers.
- CO4:** Solve the fermat numbers and gold bach's conjecture with examples.
- CO5 :** Explain factor theorem for polynomials and congruences of prime power moduli.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

**MBEC – III LAPLACE AND FOURIER TRANSFORMS**

**Theory Hours        : 5**  
**Practical Hours     : -**

**Course Code    : U21M6MBE3:1**  
**Credits         : 4**

<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To study the techniques of finding Laplace transforms and inverse Laplace transforms and real functions and their application in solving ordinary differential equations.
2. To express periodic functions as a Fourier series.

**UNIT - I**

Laplace Transform.

**UNIT - II**

Inverse Laplace Transform.

**UNIT - III**

Fourier Series.

**UNIT - IV**

Half – Rang Fourier Series.

**UNIT - V**

Fourier Integral transform.

**TEXT BOOK:**

- [1] S. Narayanan, T.K. Manicavachagom Pillay. Calculus Volume III – S.Viswanathan (Printers & Publications), Pvt., Ltd., 2011.

**UNIT I** : Chapter 5 (Sections 5.1,5.1.1, 5.1.2, 5.3 – 5.5)

**UNIT II** : Chapter 5 (Sections 5.6 to 5.10, 5.10.1)

**UNIT III** : Chapter 6 (Sections 6.1 to 6.3, 6.3.1, 6.3.2)

**UNIT IV** : Chapter 6 (Sections 6.4, 6.5.1, 6.5.2, 6.6, 6.6.1)

**UNIT V** : Chapter 6 (Sections 6.9.2, 6.10, 6.11.1, 6.11.2, 6.12 – 6.14, 6.14.1, 6.15).

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Learns that serves as a platform for advanced mathematics and for solving many real life problems.
- CO2:** Use the methods of Laplace transforms and Inverse Laplace transforms to solve
- CO3:** Derive a Fourier series of a given periodic function by evaluating Fourier coefficients.
- CO4 :** Know that any periodic function can be expressed as a Fourier series.
- CO5 :** Be able to expand an Odd or even function as a half – rang cosine or sine Fourier series.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

**MBEC – III DISCRETE MATHEMATICS**

**Theory Hours : 5**

**Course Code : U21M6MBE3:2**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives :**

1. To study various finite(discrete) structures of Mathematics.
2. To study recurrence relations and generating functions, analyses recurrence relations and provides methods for solving recurrence relations.
3. To introduce group codes, procedure for generating group codes and Inference theory of predicate calculus.

**UNIT - I**

**Recurrence relations:** Solution of finite order homogeneous Linear relations – Solution of Non-Homogeneous relations – Generating functions- Some common recurrence relations – Primitive recursive functions – Recursive and Partial Recursive Functions.

**UNIT - II**

**Coding Theory:** Introduction – Hamming Distance – Encoding a message – group codes – Procedure for Generating Group codes – Decoding and Error correction – An example of single Error correcting code.

**UNIT - III**

Connectives –Atomic and Compound statements – Well formed formulae – Truth table of a Formula – Tautology - Tautological Implications and Equivalence of Formulae - Normal Forms – Principal Normal Forms.

**UNIT - IV**

Theory of inference - Open Statements - Quantifiers – Inference theory of Predicate Calculus - statements involving more than one quantifier.

**UNIT - V**

Types of matrices - Rank of a matrix– Simultaneous linear equations – Characteristic equation and Cayley Hamilton Theorem - simple problems only.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Solve recurrence relation, linear equations and generating functions.
- CO2:** Understand the techniques of coding and decoding systems.
- CO3:** Gain the knowledge of logic and normal forms.
- CO4:** Have exposure to the inference theory and predicate calculus.
- CO5:** Have an efficiency in solving problems in matrix theory.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total**      = 75

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U21M6MBE3:3</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

- 1.To introduce the exciting world of astronomy to the students.
- 2.To help the students to study about the celestial objects.

**UNIT - I**

Relevant Properties of a sphere and relevant formulae for spherical trigonometry (All without proof) – Diurnal motion.

**UNIT - II**

Earth – Dip of horizon – Twilight – Refraction – Tangent and Cassini’s Formula.

**UNIT - III**

Kepler’s Laws of Planetary motion (statement only) – Newton’s deduction from them – Three anomalies of the Earth and relation between them.

**UNIT - IV**

Equation of time, Calendar – Geocentric Parallax – Aberration of light.

**UNIT - V**

Moon (except Moon’s librations ) – Motions of Planet (assuming that orbits are circular) – Eclipses.

**TEXT BOOK:**

- [1] S.Kumaravelu and Prof. Susheela Kumaravelu , Astronomy , SKV Publications,2002.

- UNIT I** : Chapter 1 and Chapter 2  
**UNIT II** : Chapter 3 (sections 1,2, 5,6)  
Chapter 4 (sections 117 to 122 , 129, 130)  
**UNIT III** : Chapter 6  
**UNIT IV** : Chapter 7 (section 1, 3, 4) and Chapter 9.  
**UNIT V** : Chapter 12.

- [4] Vogt, G. (1992), The Hubble Space Telescope, The Millbrook Press, Brook field, CT.

**COURSE OUTCOMES:**

The students will be able to

**CO1:** Describe and explain the observed daily and long-term motion of objects like sphere(sun, moon, planets, stars).

**CO2:** Use a earth tangent and Cassini’s formula. Explain how astronomical distances are determined using parallax and luminosity techniques.

**CO3:** Sketch and explain the relationships of three anomalies of the earth.

**CO4:** Demonstrate a thorough understanding of geocentric parallax.

**CO5:** Apply scientific reasoning to future astronomical discoveries to understand their validity as well as to everyday situations in moon.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total**     = 75

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U211AM1</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To provide the knowledge about the differentiation and various methods for evaluation of integrals.
2. To study the properties of definite integrals and methods for solving the double integrals and simple integrals.
3. To study methods for solving Fourier series.

**UNIT - I**

Successive Differentiation – n<sup>th</sup> derivative of standard functions (Derivation not needed) – simple problems only – Leibnitz theorem (proof not needed) and its applications.

**UNIT - II**

Evaluation of integrals of types

$$\begin{aligned}
 [1] \int \frac{px+q}{ax^2+bx+c} dx & \quad [2] \int \frac{px+q}{\sqrt{ax^2+bx+c}} dx & \quad [3] \int \frac{dx}{(x+p)\sqrt{ax^2+bx+c}} \\
 [4] \int \frac{dx}{a+b\cos x} & \quad [5] \int \frac{dx}{a+b\sin x} & \quad [6] \int \frac{a\cos x+b\sin x+c}{p\cos x+q\sin x+r} dx
 \end{aligned}$$

**UNIT - III**

General properties of definite integrals – Evaluation of definite integrals of types – Reduction formula (when n is a positive integer)

$$\begin{aligned}
 [1] \int e^{ax} x^n dx & \quad [2] \int \sin^n x dx & \quad [3] \int \cos^n x dx & \quad [4] \int_0^x e^{ax} x^n dx \\
 [5] \int_0^{\frac{\pi}{2}} \sin^n x dx & \quad [6] \text{ without proof } & \quad \int_0^{\frac{\pi}{2}} \sin^n x \cos^n x dx & \text{ –and illustrations}
 \end{aligned}$$

**UNIT - IV**

Evaluation of Double and Triple integrals in simple cases.

**UNIT - V**

Definition of Fourier series – Finding Fourier coefficients for a given periodic function with period  $2\pi$ . Odd & Even functions - Half range Fourier coefficients.

**TEXT BOOK(S):**

1. A. Singaravelu, Allied Mathematics – I– Aug 2007(1<sup>st</sup> Edition).
2. A. Singaravelu, Allied Mathematics – II – June – 2010(2<sup>nd</sup> Edition).

**COURSE OUT COMES:**

The students will be able to

**CO1:** Find higher derivatives of given function by using Leibnitz's theorem.

**CO2:** Evaluate indefinite integrals and reduction formula.

**CO3:** Develop the concept of definite integrals and reduction formula.

**CO4:** Solve first order differential equation utilizing the standard techniques for separable, exact, linear homogeneous equation.

**CO5:** Derive a Fourier series of a given periodic function by evaluating Fourier coefficients.

### Question Paper Pattern

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total**    =    75  
-----

<b>Theory Hours</b>	<b>: 4</b>	<b>Course Code</b>	<b>: U211AM2</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To study the various methods for solving Ordinary Differential Equations.
2. To understand the linear system of Ordinary Differential Equations.

**UNIT - I**

Exponential and Logarithmic Series (Formulae only) – Problems in Summation only.

**UNIT - II**

Differential Equation of first order and higher degree – Equations solvable for p, solvable for x, Solvable for y, Clairaut's equation (simple cases only)

**UNIT - III**

Linear Differential equations with constant coefficients – Finding particular integrals in the cases of  $e^{ax}$ ,  $\sin(ax)$ ,  $\cos(ax)$  (where a is a constant),  $x^a$  where a is a positive integer and  $e^{ax} f(x)$  where f(x) is any function of x – (only problems in all the above – No proof needed for any formula).

**UNIT - IV**

Expansion of  $\sin n\theta$ ,  $\cos n\theta$ ,  $\tan n\theta$  ( n being a positive integer) – Expansion of  $\sin^n \theta$ ,  $\cos^n \theta$ ,  $\sin^n \theta \cos^m \theta$ , in a series of sines & cosines of multiples of  $\theta$  ( $\theta$  – given in radians) – Expansion of  $\sin \theta$ ,  $\cos \theta$  and  $\tan \theta$  in terms of powers of  $\theta$  (only problems).

**UNIT - V**

Exponential formula for  $e^{i\theta}$  – Definition of Hyperbolic functions – Formulae of Hyperbolic functions – Relation between Hyperbolic and circular functions – Expansion of  $\sin hx$ ,  $\cos hx$ ,  $\tan hx$ , in powers of x – Expansion of Inverse hyperbolic functions  $\sin^{-1} x$ ,  $\cos^{-1} x$  and  $\tan^{-1} x$  – Separation of real & imaginary parts of  $\sin(x+iy)$ ,  $\cos(x+iy)$ ,  $\tan(x+iy)$ ,  $\sin h(x+iy)$ ,  $\cos h(x+iy)$ ,  $\tan h(x+iy)$ .

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Study basic problems involving the Exponential and Logarithmic Series.
- CO2:** Learn about Differential Equation of first order and higher degrees.
- CO3:** Learn about Linear equations with constant coefficients.
- CO4:** Learn about the expansion of trigonometry functions. Expose various concept of trigonometry, inverse trigonometry functions.
- CO5:** Provide Hyperbolic functions and the Relation between hyperbolic function.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**AC – III LAPLACE TRANSFORMS AND VECTOR CALCULUS**

**Theory Hours**

**: 5**

**Course Code : U211AM3**

<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To study the techniques of finding Laplace transforms and Inverse Laplace transforms and their application in solving differential equations.
2. To study the Derivation of vectors and line integral, surface integral and volume integral and their applications.

**UNIT - I**

Laplace Transforms – Definition –  $L(e^{at})$ ,  $L(e^{-at})$ ,  $L(\cos(at))$ ,  $L(\sin(at))$ ,  $L(t^n)$ , where  $n$  is a positive integer - Basic theorems in Laplace Transforms (formula only) –  $L[e^{-st}\cos bt]$ ,  $L[e^{-st}\sin bt]$ ,  $L[e^{-st}f(t)] - L[f(t)]$ ,  $L[f'(t)]$ ,  $L[f''(t)]$ .

**UNIT - II**

Inverse Laplace Transforms related to the above standard forms – Solving of differential equations using Laplace Transforms.

**UNIT - III**

Vector differentiation – Velocity and Acceleration Vectors – Gradient of a vector – Directional Derivative – Unit Normal Vector – Divergence – Curl – Solenoidal and Irrotational vectors – Properties connecting grad, div and curl of a vector.

**UNIT - IV**

Vector Integration – Line integrals – Surface integrals – Volume integrals.

**UNIT - V**

Gauss Divergence Theorem (Statement only), Verification and application – Stoke's Theorem (statement only), Verification and application.

**TEXT BOOK:**

1. Dr. A.Singaravelu, Allied Mathematics , Fourth Revised Edition, Aug – 2013.

**REFERENCE(S):**

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Learns that serves as a platform for advanced mathematics and for solving many real life problems.
- CO2:** Use the methods of laplace transforms and Inverse laplace transforms to solve differential equations with constant coefficients.
- CO3:** Determine gradient vector fields and find potential functions, derivatives of vector functions.
- CO4:** Evaluate line, surface and volume integrals. Compute length, area and volume of surface using vector integration.
- CO5:** Apply the Gauss Divergence Theorem and Stoke’s Theorem.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

## AC – I NUMERICAL METHODS

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U211AM1:CS</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives :

1. To introduce different numerical techniques to solve Algebraic and differential equations.
2. To develop skills in solving problems using numerical techniques.

### UNIT - I

Algebraic and Transcendental Equations – Finding the roots of the given equation using Bisection Method – Newton Raphson Method, Iteration Method.

### UNIT - II

Finite differences – Forward, Central and Backward differences – Newton's forward & backward interpolation formulae – Lagrange's interpolation polynomial.

### UNIT - III

Numerical Integration – Trapezoidal and Simpson's 1/3 and 3/8 rules.

### UNIT - IV

Solutions to linear systems – Gaussian Elimination Method – Jacobi and Gauss sieidal Iterative methods.

### UNIT - V

Numerical solution of ordinary differential Equations : Solution by Taylor series method – Euler's Method – Runge - Kutta second and fourth order methods,(Proof need not necessary, simple problems only for all units).

**UNIT I** : Chapter 2 (sections 2.1,2.2, 2.3, 2.5)

**UNIT II** : Chapter 3 (sections 3.3, 3.3.1, 3.3.2, 3.3.3, 3.6, 3.9.1)

**UNIT III** : Chapter 5 (sections 5.4.1, 5.4.2, 5.4.3)

**UNIT IV** : Chapter 6 (sections 6.3, 6.3.2)  
Chapter 8 (sections 8.3.1, 8.3.2)

**UNIT V** : Chapter 7 (sections 7.1, 7.2, 7.4, 7.5).

### TEXT BOOK:

1. S.S. Sastry, Introductory Methods of Numerical Analysis, prentice Hall of India, private limited Third edition - 2001.

### REFERENCE(S):

- [1]. A. Singaravelu Numerical Methods , 2002.
- [2]. Dr. M.K.Venketaraman, M.A., M.Tech., Ph.D. Numerical Methods in Science and Engineering , National publishing Co., Chennai, 2000.

**COURSE OUTCOMES:**

The students will be able to

**CO1** : Obtain numerical solutions of algebraic and transcendental equations.

**CO2** : Learn about various interpolating and extrapolating methods to find numerical solutions

**CO3** : Understand the Trapezoidal and Simpson’s 1/3 and 3/8 rules.

**CO4**: Solve initial and boundary value problems in differential equations using numerical methods.

**CO5** : Apply Taylor’s series and Runge - Kutta methods to find the solution of the equations.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C** :  $3 \times 5 = 30$  (Each Unit Carries One Questions )

-----  
**Total**    =    75  
 -----

<b>Theory Hours</b>	<b>: 4</b>	<b>Course Code</b>	<b>: U211AM2:CS</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

- 1.To introduce the various techniques of Operations Research.
- 2.To make students solve real life problems in Business and Management.

**UNIT - I**

Introduction to operations Research – Linear programming problem – Mathematical formulation of LPP – Graphical Solution methods – Simplex methods with  $\leq$ ,  $\geq$ , = constraints.

**UNIT - II**

Transportation problems: Definition – Matrix form of T.P – Initial Basic feasible solution – The North West corner Rule – The Row minima method – The column minima Method – The matrix minima Method – Vogel’s Approximation method – Unbalanced T.P.

**UNIT - III**

Assignment problem – Hungarian Algorithm – Maximization method – Minimization method– Special cases in Assignment problems.

**UNIT - IV**

Net work scheduling by PERT/CPM – Introduction – Network and basic components – Rules of Network construction – critical path analysis.

**UNIT - V**

Probability considerations in PERT– Distinction between PERT and CPM (Simple problem only).

**TEXT BOOK :**

1. Kanti swarup, P.K. Gupta and Manmohan, Operations Research –9<sup>th</sup> Edition 2001, published by sultan Chand & Sons, New Delhi.

- UNIT I** : Chapter 2 (sections 2.1, 2.2)  
Chapter 3 (sections 3.2, 3.3)  
Chapter 4 (sections 4.3, 4.4)
- UNIT II** : Chapter 10 (sections 10.1, 10.5, 10.8, 10.9)
- UNIT III** : Chapter 11 (sections 11.1, 11.2, 11.3,11.4)
- UNIT IV** : Chapter 21 (sections 21.1, 21.2, 21.4, 21.5)
- UNIT V** : Chapter 21 (sections 21.6, 21.7).

- [2]. Richard Bronson, Theory and Problems of Operations Research, Tata McGraw Hill Publishing Company Ltd., New Delhi, 1982.

**COURSE OUT COMES:**

The students will be able to

- CO1:** Learn mathematical techniques that will help them to understand and analyze managerial problems in industry so that resources (Capitals, Materials, staffing and machines) may be utilized more effectively.
- CO2:** Use mathematical software to solve the Transportation Problems.
- CO3:** Apply the Special cases in Assignment problems.
- CO4:** Solve the Network scheduling of CPM method problem.
- CO5:** Understand the Network scheduling of PERT method.

**Question Paper Pattern**

**SECTION A :**  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B :**  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

**SECTION C :**  $3 \times 5 = 30$  (Each Unit Carries One Questions )

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U211AM3:CS</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

**Objectives:**

1. To make the students gain wide knowledge in probability which plays a main role in solving real life problems.
2. To study the applications of Binomial and Poisson distributions.

**UNIT - I**

**Theory of Probability:** Basic Terminology – Axiomatic approach to probability – Some theorems on probability – Conditional probability – Multiplication theorem of Probability – Independent events.

**UNIT - II**

Random variables – Distribution function – Discrete and Continuous random variable – Two- dimensional random variables.

**UNIT - III**

**Mathematical Expectation:** Expected value of a Random variable – Properties of Expectation and properties of variance – Covariance – Moment generating function.

**UNIT - IV**

Correlation – Definition – Scatter diagram – Kerl pearson’s coefficient of correlation – Rank correlation – Simple problems. Linear Regression – Regression lines x on y and y on x – Simple problems.

**UNIT - V**

**Special discrete distribution:** Binomial and Poisson distribution – Moment generating functions of these distributions – Additive Property of Binomial and Poisson distributions - Continuous probability distribution - Normal distribution – Chief characteristics of normal distributions.

**TEXT BOOK:**

[1]. S.C. GUPTA and V.K. KAPOOR, Fundamentals of Mathematical Statistics, Sultan Chand and Sons, Educational publishers New Delhi. Reprint 2003.

**UNIT I** : Chapter 3 (Sections 3.3, 3.8, 3.8.5, 3.9, 3.9.1, 3.9.3, 3.10, 3.11, 3.12)

- UNIT II** : Chapter 5 (Sections 5.2, 5.2.1, 5.3, 5.3.1, 5.4, 5.4.1, 5.5, 5.5.1)
- UNIT III** : Chapter 6 (Sections 6.2, 6.4, 6.5, 6.6) and 7 (Sections 7.1, 7.1.2)
- UNIT IV** : Chapter 10 (Sections 10.2, 10.3, 10.4 to 10.4.2, 10.7 to 10.7.3) and Chapter 11 (Sections 11.2, 11.2.1)
- UNIT V** : Chapter 8 (Sections 8.4, 8.4.6, 8.4.7, 8.5, 8.5.1, 8.5.5, 8.5.8) and Chapter 9 (Sections 9.2, 9.2.2).

**REFERENCE(S):**

- [1]. A.Singaravelu, Probability and statistics (paper - III), March 2002.
- [2]. P.Thambidurai, Practical Statistics, Rainbow Publishers – CBI(1991).

**COURSE OUT COMES:**

The students will be able to

- CO1** : Understand the basic concept of probability.
- CO2**: Appreciate the importance of probability distribution of random variables and to know the notion of central tendency.
- CO3**: Establish the Mathematical Expectation.
- CO4**: Understand the correlation and regression coefficient.
- CO5**: Important probability distributions of binomial, poisson and normal.

**Question Paper Pattern**

**SECTION A** :  $20 \times 1 = 20$  (Each Unit Carries Four Multiple Choice Questions )

**SECTION B** :  $5 \times 5 = 25$  (Each Unit Carries Two Questions (Either or Type ))

## AC – III DISCRETE MATHEMATICS

<b>Theory Hours</b>	<b>: 5</b>	<b>Course Code</b>	<b>: U211AM3:CS</b>
<b>Practical Hours</b>	<b>: -</b>	<b>Credits</b>	<b>: 4</b>
<b>Exam Hours</b>	<b>: 3</b>	<b>Internal</b>	<b>: 25</b>
		<b>External</b>	<b>: 75</b>

### Objectives :

1. To study various finite(discrete) structures of Mathematics.
2. To study recurrence relations and generating functions, analyses recurrence relations and provides methods for solving recurrence relations
3. To introduce group codes, procedure for generating group codes and Inference theory of predicate calculus

### UNIT - I

**Recurrence relations:** Solution of finite order homogeneous Linear relations – Solution of Non-Homogeneous relations – Generating functions- Some common recurrence relations – Primitive recursive functions – Recursive and Partial Recursive Functions.

### UNIT - II

**Coding Theory:** Introduction – Hamming Distance – Encoding a message – group codes – Procedure for Generating Group codes – Decoding and Error correction – An example of single Error correcting code.

### UNIT - III

Connectives –Atomic and Compound statements – Well formed formulae – Truth table of a Formula – Tautology - Tautological Implications and Equivalence of Formulae - Normal Forms – Principal Normal Forms.

### UNIT - IV

Theory of inference - Open Statements - Quantifiers – Inference theory of Predicate Calculus - statements involving more than one quantifier.

### UNIT - V

Types of matrices - Rank of a matrix– Simultaneous linear equations – Characteristic equation and Cayley Hamilton Theorem - simple problems only.

**COURSE OUTCOMES:**

The students will be able to

- CO1:** Solve recurrence relation, linear equations and generating functions.
- CO2:** Understand the techniques of coding and decoding systems.
- CO3:** Gain the knowledge of logic and normal forms.
- CO4:** Have exposure to the inference theory and predicate calculus.
- CO5:** Have an efficiency in solving problems in matrix theory.

**Question Paper Pattern**
